

Cyber security

Silent Scraper Academy

Abstract

This web-based platform supports ethical hackers by offering a scanning dashboard with integrated network and web testing tools. It is linked to legal test labs, allowing trainees to practice real-world cybersecurity in a safe and controlled environment

Introduction

Ethical Hacking. Real Tools. Safe Labs.
A web platform for hands-on cybersecurity training using real scanning tools in legally controlled environments.

Methodology

Our methodology focuses on hands-on .learning through realistic scenarios
Users select tools, perform scans on — simulated systems, and analyze results all within a controlled, legal, and practical .training environment

Results

The platform enabled users to conduct real scans, interpret outputs, and improve ,their cybersecurity skills through safe .legal practice environments

Web Scan results:

Network Scan results:

Conclusion

This project proves that ethical hacking can be taught effectively through hands-on tools and realistic, legally controlled environments. It empowers learners to build practical skills, understand real-world threats, and prepare for cybersecurity careers — all in a safe and guided platform.

Future Vision

This platform is just the beginning. In future phases, it will evolve into a full-scale cybersecurity training ecosystem with user authentication, personalized dashboards, and gamified labs.
The goal? To compete with global platforms like Hack The Box — by offering local, Arabic-friendly, legally authorized content tailored to real-world cyber threats.
Future development includes certification tracks, AI-powered lab creation, team-based competitions, and an open marketplace for trainers to publish and monetize their own labs.
We're building more than a project.
We're launching the next generation of cybersecurity education in the Arab world.
