Supervisors:

- Dr. Ahmed Fawzy
- Eng. Mina

Components:

Description:

The project is a web-based platform that combines a main website with a set of experimental 'labs' containing real security vulnerabilities. The platform aims to train students and anyone interested in cybersecurity to discover and exploit vulnerabilities in a practical and safe environment helping them gain hands-on experience and essential skills required in the job market.

Beneficiaries:

- 🎓 University and institute students
- 🛡️ Cybersecurity professionals and enthusiasts
- 🏢 Companies seeking to train their staff
- 🎓 Accredited training centers

Future work:

This platform marks only the beginning. It's set to grow into a comprehensive cybersecurity training ecosystem — with login systems, personalized dashboards, and interactive, gamified labs. The long-term vision is to offer a powerful, Arabic-focused alternative to platforms like Hack The Box, combining real-world scenarios with legal and localized content. Future plans include certification programs, AI-driven lab generation, competitive team features, and a marketplace for trainers to share and monetize their labs. More than a project — it's the future of cyber education in the Arab world.
